Civil Liberties in Real Life Aug 15 2021 This volume brings together eight US authors breaking new ground with multidisciplinary perspectives and an exciting range of real-life topics concerning the central question, 'What is civil liberty?' The contributions here dive into freedom of speech, religious freedom, freedom of assembly, and much more, examining how and why marginalized groups such as African Americans, women, and queers used civil liberties in their struggle for equality. Topics covered in this volume range from considering how we can moderate the corrupting influences of luxury and consumerism promoted by private property rights to the dilemma of teaching politically controversial civil liberty topics and the role of free speech in the classroom. The book is a must-read for anyone interested in civil liberty, whether an expert, novice, or in-between.

How Learning Works Oct 29 2022 Praise for How Learning Works "How Learning Works is the perfect title for this excellent book. Drawing upon new research in psychology, education, and cognitive science, the authors have demystified a complex topic into clear explanations of seven powerful learning principles. Full of great ideas and practical suggestions, all based on solid research evidence, this book is essential reading for instructors at all levels who wish to improve their students' learning." —Barbara Gross Davis, assistant vice chancellor for educational development, University of California, Berkeley, and author, *Tools for Teaching* "This book is a must-read for every instructor, new or experienced. Although I have been teaching for almost thirty years, as I read this book I found myself resonating with many of its ideas, and I discovered new ways of thinking about teaching." —Eugenia T. Paulus, professor of chemistry, North Hennepin Community College, and 2008 U.S. Community Colleges Professor of the Year from The Carnegie Foundation for the Advancement of Teaching and the Council for Advancement and Support of Education "Thank you Carnegie Mellon for making accessible what has previously been inaccessible to those of us who are not learning scientists. Your focus on the essence of learning combined with concrete examples of the daily challenges of teaching and clear tactical strategies for faculty to consider is a welcome work. I will recommend this book to all my colleagues." —Catherine M. Casserly, senior partner, The Carnegie Foundation for the Advancement of Teaching "As you read about each of the seven basic learning principles in this book, you will find advice that is grounded in learning theory, based on research evidence, relevant to college teaching, and easy to understand. The authors have extensive knowledge and experience in applying the science of learning to college teaching, and they graciously share it with you in this organized and readable book." —From the Foreword by Richard E. Mayer, professor of psychology, University of California, Santa Barbara; coauthor, *e-Learning and the Science of Instruction*; and author, *Multimedia Learning*

Clinical Magnetic Resonance Spectroscopy Jun 13 2021 Nobody can know everything. For the successful application of techniques based on nuclear magnetic resonance to clinical problems, it is a vital necessity that individuals with widely different skills should learn a little of each others' trades by co-operation and communication. Ernest Cady has long proved himself a master of these arts to his colleagues at University College London, and by writing this excellent book he extends his experience to a wide circle of readers. Although the nuclear magnetic resonance (NMR) phenomenon had been predicted theoretically (and to some degree demonstrated experimentally) appreciably earlier, it required the advances in electronics that took place during World War II to turn NMR into a practical technique, as demonstrated independently in 1946 by Bloch and Purcell. Since then, NMR has been used extensively and increasingly by chemists and physicists. In the 1970s the first applications of NMR to animal organs yielded important advances in our knowledge of the biochemical and physiological processes as they occur in genuinely intact tissues. They showed incidentally that some conventional techniques introduce significant artifacts.

Louis Armstrong's Hot Five and Hot Seven Recordings Mar 30 2020 In Louis Armstrong's Hot Five and Hot Seven Recordings, Brian Harker strikes a unique balance between 1920s views of jazz and those of today. Vietnam Studies - Seven Firefights In Vietnam [Illustrated Edition] Sep 28 2022 [Includes 28 illustrations & 15 maps] Engagements with the elusive Vietcong and NVA were unlike the frontlines and complex battles that the United States military had been fighting for over a hundred years; they were often short, brutal affairs. The U.S. soldiers and marines were often thrust into battle outnumbered and in hostile territory, or ambushed in convoy or on patrol; but given a fair fight the Americans would most often come out on top. Three authors, all of whom had seen action in Vietnam, set about collecting and illustrating examples of the types of fighting that occurred during the war; from the famous battle between the 7th Cavalry and the NVA in the Ia Drang valley to the countrywide Tet offensive. The examples recounted in this book in vivid and expert detail are; Fight at Ia Drang by John A. Cash Convoy Ambush on Highway 1 by John Albright Ambush at Phuoc An by John A. Cash Fight Along the Rach Ba Rai by John Albright Three Companies at Dak To by Allan W. Sandstrum Battle of Lang Vei by John A. Cash

Gunship Mission by John A. Cash Authors “John Albright served in Vietnam as a captain in the 11th Armored Cavalry Regiment and participated in the action, "Convoy Ambush on Highway 1." ...He has served two short terms in Vietnam as a civilian historian while employed in the Office of the Chief of Military History. “John A. Cash, Major, Infantry, an experienced officer, served in Vietnam as a company commander and as a member of a brigade operations staff in the 1st Cavalry Division (Airmobile), in the latter capacity participating in the action, "Fight at Ia Drang." He also served two short tours in Vietnam as a historian on special missions for the Office of the Chief of Military History, to which he was assigned from 1966 through 1968. On the second short tour he was involved in the action, "Gunship Mission." “Allan W. Sandstrum, Lieutenant Colonel, Field Artillery, served on the G-3 staff of I Field Force, Vietnam.”

Impact of Modernization on Development and Demographic Behaviour Oct 05 2020 Articles in this volume focus on the impact of rural development policies and projects on demographic behaviour in seven countries in Asia and Latin America. The Philippines study examines changes over time in two rural communities in Southern Mindanao influenced by the Green Revolution and agrarian reform. The Malaysian project investigates the impact of modern industrial expansion in a traditional rural area upon the family economy and gender roles. In Bangladesh, the effect of an integrated program for rural development upon demographic change, especially on fertility and family-planning behaviour, is examined. The Indian study focuses on the relationship between child labour and fertility in a village where jewelry-making is an important cottage industry. In rural Colombia, demographic and economic behaviour are compared in three different economic sectors. The Argentinian study investigates the demographic and economic characteristics of households belonging to different agricultural sectors of a relatively underdeveloped province. Finally, in Peru, demographic and economic behaviour in four rural areas, characterized by different levels of development, are compared.

Seven Going on Seventeen May 24 2022 The tween is the «new girl on the block» in girlhood studies. Although the study of tween life may have derived from a particular marketing orientation at the end of the twentieth century, it is not limited by it. On the contrary, this collection of essays shows that «tween» is not a simple or unified concept, nor is it limited to a certain class of girls in a few countries. This collection by an international group of authors highlights specific methodologies for working with (and studying) tween-age girls, provides challenges to the presumed innocence of girlhood, and engages in an analysis of marketing in relation to girlhood. In so doing, this book offers a reading on these

three or four years in a girl's life that suggests that this period is as fascinating as the teen years, and as generative in its implications for girlhood studies as studies of both younger and adolescent girls.

Sources of Industrial Leadership Jun 25 2022 This book describes and analyzes how seven major high-tech industries evolved in the United States, Japan, and Western Europe. The industries covered are machine tools, organic chemical products, pharmaceuticals, medical devices, computers, semiconductors, and software. In each of these industries, firms located in one or a very few countries became the clear technological and commercial leaders. In a number of cases, the locus of leadership changed, sometimes more than once, over the course of the histories studied. The focus of the book is on the key factors that supported the emergence of national leadership in each industry, and the reasons behind the shifts when they occurred. Special attention is given to the national policies that helped to create or sustain industrial leadership.

Making Learning Whole Apr 11 2021 New in Paperback! Make learning more meaningful by teaching the "whole game" David Perkins, a noted authority on teaching and learning and co-director of Harvard's Project Zero, introduces a practical and research-based framework for teaching. He describes how teaching any subject at any level can be made more effective if students are introduced to the "whole game," rather than isolated pieces of a discipline. Perkins explains how learning academic subjects should be approached like learning baseball or any game, and he demonstrates this with seven principles for making learning whole: from making the game worth playing (emphasizing the importance of motivation to sustained learning), to working on the hard parts (the importance of thoughtful practice), to learning how to learn (developing self-managed learners). Vividly explains how to organize learning in ways that allow people to do important things with what they know Offers guidelines for transforming education to prepare our youth for success in a rapidly changing world Filled with real-world, illustrative examples of the seven principles At the end of each chapter, Perkins includes "Wonders of Learning," a summary of the key ideas.

The Science of Sin Oct 25 2019 Pride, lust, gluttony, greed, envy, sloth, and anger. They're considered "deadly" because of their capacity to generate other evils. The truth is, we all sin and we do it all the time—in fact, usually several times over before breakfast! But human behavior, argues social psychologist Simon Laham, is more complex than "good" or "evil." In psychology, these sins aren't considered morally wrong or even uniformly bad, but are treated rather as complex and interesting psychological states that if, indulged wisely, can be functional, adaptive, and lead to a range of positive effects. The Science of Sin takes on these so-called sins one by one and through psychological research shows that being bad can be oh-so-good for you. Did you know that: · Being slow and lazy can help you win the race? · Anger makes you more open-minded? · Coveting what others have not only makes you more creative but bolsters self- esteem? So go ahead, eat that last cookie and kick back on the couch for a day of TV with your neighbor's boyfriend—from gluttony to greed, envy to lust, Laham shows how even the deadliest, most decadent of vices can make you smart, successful, and happy.

The Seven Deadly Sins of Psychology Nov 18 2021 Why psychology is in peril as a scientific discipline—and how to save it Psychological science has made extraordinary discoveries about the human mind, but can we trust everything its practitioners are telling us? In recent years, it has become increasingly apparent that a lot of research in psychology is based on weak evidence, questionable practices, and sometimes even fraud. The Seven Deadly Sins of Psychology diagnoses the ills besetting the discipline today and proposes sensible, practical solutions to ensure that it remains a legitimate and reliable science in the years ahead. In this unflinchingly candid manifesto, Chris Chambers shows how practitioners are vulnerable to powerful biases that undercut the scientific method, how they routinely torture data until it produces outcomes that can be published in prestigious journals, and how studies are much less reliable than advertised. Left unchecked, these and other problems threaten the very future of psychology as a science—but help is here.

Seven Rules for Social Research Aug 27 2022 Seven Rules for Social Research teaches social scientists how to get the most out of their technical skills and tools, providing a resource that fully describes the strategies and concepts no researcher or student of human behavior can do without. Glenn Firebaugh provides indispensable practical guidance for anyone doing research in the social and health

sciences today, whether they are undergraduate or graduate students embarking on their first major research projects or seasoned professionals seeking to incorporate new methods into their research. The rules are the basis for discussions of a broad range of issues, from choosing a research question to inferring causal relationships, and are illustrated with applications and case studies from sociology, economics, political science, and related fields. Though geared toward quantitative methods, the rules also work for qualitative research. *Seven Rules for Social Research* is ideal for students and researchers who want to take their technical skills to new levels of precision and insight, and for instructors who want a textbook for a second methods course. The Seven Rules There should be the possibility of surprise in social research Look for differences that make a difference, and report them. Build reality checks into your research. Replicate where possible. Compare like with like. Use panel data to study individual change and repeated cross-section data to study social change. Let method be the servant, not the master.

The Seven Principles for Making Marriage Work Dec 27 2019 Just as Masters and Johnson were pioneers in the study of human sexuality, so Dr. John Gottman has revolutionized the study of marriage. As a professor of psychology at the University of Washington and the founder and director of the Seattle Marital and Family Institute, he has studied the habits of married couples in unprecedented detail over the course of many years. His findings, and his heavily attended workshops, have already turned around thousands of faltering marriages. This book is the culmination of his life's work: the seven principles that guide couples on the path toward a harmonious and long-lasting relationship. Straightforward in their approach, yet profound in their effect, these principles teach partners new and startling strategies for making their marriage work. Gottman helps couples focus on each other, on paying attention to the small day-to-day moments that, strung together, make up the heart and soul of any relationship. Being thoughtful about ordinary matters provides spouses with a solid foundation for resolving conflict when it does occur and finding strategies for living with those issues that cannot be resolved. Packed with questionnaires and exercises whose effectiveness has been proven in Dr. Gottman's workshops, *The Seven Principles for Making Marriage Work* is the definitive guide for anyone who wants their relationship to attain its highest potential. *The Seven Principles for Making Marriage Work* is the result of Dr. John Gottman's many years of closely observing thousands of marriages. This kind of longitudinal research has never been done before. Based on his findings, he has culled seven principles essential to the success of any marriage. Maintain a love map. Foster fondness and admiration. Turn toward instead of away. Accept influence. Solve solvable conflicts. Cope with conflicts you can't resolve. Create shared meaning. Dr. Gottman's unique questionnaires and exercises will guide couples on the road to revitalizing their marriage, or making a strong one even better.

Studies in Language and Social Interaction Aug 03 2020 This collection offers empirical studies and theoretical essays about human communication in everyday life. The writings come from many of the world's leading researchers and cut across academic boundaries, engaging scholars and teachers from such disciplines as communication, sociology, anthropology, linguistics, and education. Chapters emphasize empirical, qualitative studies of people's everyday uses of talk-in-interaction, and they feature work in such areas as sociolinguistics, conversation analysis, discourse analysis, and ethnography. The volume is dedicated to and highlights themes in the work of the late Robert Hopper, an outstanding scholar in communication who pioneered research in Language and Social Interaction (LSI). The contributors examine various features of human interaction (such as laughter, vocal repetition, and hand gestures) occurring naturally within a variety of settings (at a dinner table, a doctor's office, an automotive repair shop, and so forth), whereby interlocutors accomplish aspects of their interpersonal or institutional lives (resolve a disagreement, report bad medical news, negotiate a raise, and more), all of which may relate to larger social issues (including police brutality, human spirituality, death, and optimism). The chapters in this anthology show that social life is largely a communicative accomplishment and that people constitute the social realities experienced every day through small and subtle ways of communicating, carefully orchestrated but commonly taken for granted. In showcasing the diversity of contemporary LSI research, this volume is appropriate for scholars and graduate students in language and social interaction, communication, sociology, research methods, qualitative research methods, discourse analysis, conversation analysis, linguistics, and related areas.

Studies of Fossilization in Second Language Acquisition Jul 22 2019 This volume, as a sequel to *Fossilization in Adult Second Language Acquisition* by Han (2004), brings together a collection of most recent theoretical and empirical studies on fossilization, a classic problem of second language acquisition. It covers a wide range of perspectives and issues. The analyses discussed herein address key concerns of many second language researchers and teachers with regard to just how far anyone can go in learning a new language.

Learning and Understanding Jan 08 2021 This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college

science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

Higher Education Research Methodology Sep 04 2020 This book is for anyone who wishes to improve university teaching and learning through systematic inquiry. It provides advice, but also a constructive critique of research methods and, in turn, the authors also make a contribution to the theories of research methodology. Topics covered include ontology, epistemology and engagement with academic literature, as well as research design approaches and methods of data collection. There is a keen focus on quality in both the analysis and evaluation of research and new models are proposed to help the new researcher. The authors conclude by examining the challenges in getting work published and close with some words on quality of thought and action. The ideas in the book come from the authors' extensive experience in teaching research methods courses in higher education, health and the corporate sector, as well as several empirical research projects that have helped provide a methodology for higher education. It will be of particular interest to postgraduate students, academic developers and experienced academics from a wide variety of disciplines.
