Taft Dec 14 2020 An ex-jazz drummer wants nothing more than to be a good father in this moving family novel by the New York Times–bestselling author of *The Dutch House*. When his lover takes away his son, he's left only with his Beale Street, Memphis bar. He hires a young waitress named Fay Taft who brings with her a desperate, dangerous brother, Carl, and the possibility of new

intimacy. Nickel finds himself consumed with Fay and Carl's dead father—Taft—obsessing over and reconstructing the life of a man he never met. A stunning artistic achievement, Taft confirms Ann Patchett's standing as one of the most gifted writers of her generation and reminds us of our deepest instincts to protect the people we love. “What could be merely a literary parlor trick—keeping three stories in the air at once—becomes...as resonant as a blues song, each story harmonizing with and answering others.... Expect miracles when you read Ann Patchett’s fiction.”—New York Times “A moving emblem of fatherhood’s rarely explored passion.”—Los Angeles Times “Patchett writes with remarkable conviction and attention to telling detail.... [She] is excellent at portraying the steady love and interest that holds the family members together, even though that love and interest isn't always successful in preserving the members from danger.”—Jane Smiley, Pulitzer Prize-winning author of *Golden Age* “Strikingly original.”—Kirkus Reviews

Printers without Borders Feb 13 2021 This innovative study shows how printing and translation transformed English literary culture in the Renaissance. Focusing on the century after Caxton brought the press to England in 1476, Coldiron illustrates the foundational place of foreign, especially French language, materials. The book reveals unexpected foreign connections between works as different as Caxton's first printed translations, several editions of Book of the Courtier, sixteenth-century multilingual poetry, and a royal Armada broadside. Demonstrating a new way of writing literary history beyond source-influence models, the author treats the patterns and processes of translation and printing as co-transformations. This provocative book will interest scholars and advanced students of book history, translation studies, comparative literature and Renaissance literature.

How Tobacco Smoke Causes Disease Jul 29 2019 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

An Introduction to Disturbance Ecology Jun 19 2021 This book represents an introductory review of disturbance ecology and threat analysis, providing schematic concepts and approaches useful for work on sites that are affected by the impact of human actions. It is aimed at conservation and environmental practitioners, who will find tips for choosing methods and approaches when there are

conflicts between the natural components and human activity. It is also addressed to students of applied ecology, ecosystem management, land-use planning and environmental impact assessment. It discusses a number of topics covered in the programs of many university courses related to basic ecology and ecology of disturbance, the latter constituting a field of great interest because of its implications and repercussions in applied territorial science. The book is divided into two parts: the first focuses on the theoretical and disciplinary framework of the ecology of disturbance, while the second is devoted to the analysis of anthropogenic threats. This, in particular, discusses the most recent approach, which uses a conventional nomenclature to allow a coarse-grained quantification and objective assessment of threat impact on different environmental components. Such an approach facilitates the comparison of hierarchically different events and, therefore, helps define the priorities for management and conservation strategies.
