**Christianity in India** Oct 17 2021 Christianity has been present in India since at least the third century, but the faith remains a small minority. Even so, Christianity is growing rapidly in parts of the subcontinent, and has made an impact far beyond its numbers. Yet Indian Christianity remains highly controversial, and it has suffered growing discrimination and violence. This book shows how Christian converts and communities continue to make contributions to Indian society, even amid social pressure and violent persecution. In a time of controversy in India about the legitimacy of conversion and the value of religious diversity, Christianity in India addresses the complex issues of faith, identity, caste, and culture. It documents the outsized role of Christians in promoting human rights, providing education and healthcare, fighting injustice and exploitation, and stimulating economic uplift for the poor. Readers will come away surprised and sobered to learn how these active initiatives often invite persecution today. The essays draw on intimate and personal encounters with Christians in India, past and present, and address the challenges of religious freedom in contemporary India.

**Rebel Governance in Civil War** Jul 22 2019 This is the first book to examine and compare how rebels govern civilians during civil wars in Latin America, Africa, Asia, and Europe. Drawing from a variety of disciplinary traditions, including political science, sociology, and anthropology, the book provides in-depth case studies of specific conflicts as well as comparative studies of multiple conflicts. Among other themes, the book examines why and how some rebels establish both structures and practices of rule, the role of ideology, cultural, and material factors affecting rebel governance strategies, the impact of

governance on the rebel/civilian relationship, civilian responses to rebel rule, the comparison between modes of state and non-state governance to rebel attempts to establish political order, the political economy of rebel governance, and the decline and demise of rebel governance attempts.

**Labour, state and society in rural India** Oct 25 2019 Behind India's high recent growth rates lies a story of societal conflict that is scarcely talked about. Across its villages and production sites, state institutions and civil society organisations, the dominant and less well-off sections of society are engaged in antagonistic relations that determine the material conditions of one quarter of the world's 'poor'. Increasingly mobile and often with several jobs in multiple locations, India's 'classes of labour' are highly segmented but far from passive in the face of ongoing exploitation and domination. Drawing on over a decade of fieldwork in rural South India, the book uses a 'class-relational' approach to analyse continuity and change in processes of accumulation, exploitation and domination. By focusing on the three interrelated arenas of labour relations, the state and civil society, it explores how improvements can be made in the conditions of labourers working 'at the margins' of global production networks, primarily as agricultural labourers and construction workers. Elements of social policy can improve the poor's material conditions and expand their political space where such ends are actively pursued by labouring class organisations. More fundamental change, though, requires stronger organisation of the informal workers who make up the majority of India's population.

Democracy in the Woods Aug 03 2020 How do societies negotiate the apparently competing agendas of environmental protection and social justice? Why do some countries perform much better than others on this front? *Democracy in the Woods* addresses these questions by examining land rights conflicts and the fate of forest-dependent peasants in the context of the different forest property regimes in India, Tanzania, and Mexico. These three countries are prominent in the scholarship and policy debates about national forest policies and land conflicts associated with international support for nature conservation. This unique comparative study of national forestland regimes challenges the received wisdom that redistributive policies necessarily undermine the goals of environmental protection. It shows instead that the form that national environmental protection efforts take - either inclusive (as in Mexico) or exclusive (as in Tanzania and, for the most part, in India) - depends on whether dominant political parties are compelled to create structures of political intermediation that channel peasant demands for forest and land rights into the policy process. This book offers three different tests of this theory of political origins of forestland regimes. First, it explains why it took the Indian political elites nearly sixty years to introduce meaningful reforms of the colonial-era forestland regimes. Second, it successfully explains the rather counterintuitive local outcomes of the programs

for formalization of land rights in India, Tanzania, and Mexico. Third, it provides a coherent explanation of why each of these three countries proposes a significantly different distribution of the benefits of forest-based climate change mitigation programs being developed under the auspices of the United Nations. In its political analysis of the control over and the use of nature, this book opens up new avenues for reflecting on how legacies of the past and international interventions interject into domestic political processes to produce specific configurations of environmental protection and social justice. *Democracy in the Woods* offers a theoretically rigorous argument about why and in what specific ways politics determine the prospects of a socially just and environmentally secure world. \*Included in the Studies in Comparative Energy and Environmental Politics Series

Social Movements in India May 12 2021 Social movements primarily take the form of non-institutionalised collective political action which strive for political and/or social change. While India has witnessed many such movements over the centuries, it is only recently that scholars have begun to study them in depth. This thoroughly revised and updated version of a seminal book critically examines and reviews the literature concerning social movements in India from 1857 to the present. In the process he discusses the theoretical issues raised by various scholars while analysing major trends in different movements. In conclusion, he suggests areas for future research.

*The Underbelly of the Indian Boom* May 24 2022 As India emerges as a major economic power, producing dollar billionaires rising at the rate of 17 per year, more than 800 million Indians eke out a living on less than two dollars a day. This book takes the reader to the underbelly of the Indian boom, an India that is not shining but is struggling to survive. From the Indo-Soviet Bhilai Steel Plant in Chhattisgarh, where an aristocracy of labour is increasingly being replaced by a more vulnerable contract labour force, we move to the banks of the Hoogly River. Here, Norwegian shipping companies exploit a precarious labour force

that is as vulnerable to the vagaries of global finance and its crisis as the elderly, especially women and wage-workers, who live in the slums of Chennai. Also in Tamil Nadu, but this time in Tiruppur, we find that the garment and textile industries boom has nurtured new regimes of debt bondage among industrial workers. Though public concern about the vulnerability in which poor people find themselves has resulted in new nation-wide schemes framed in the language of rights, we find in Bihar and Madhya Pradesh that the practical workings of these schemes are dependent on the regional political systems in which they are enmeshed. We end in the belly of the Maoist-inspired Naxalite insurgency, denounced by the Indian government as the country's greatest security challenge, where the poor are being mobilised to rise against the injustices of the Indian state. This book was originally published as a special issue of *Economy and Society*.

Algae and Environmental Sustainability Aug 23 2019 This book presents the dynamic role of algae in a sustainable environment. Two major aspects, namely bioenergy and bioremediation, have been elaborated in various chapter contributed by scientists and teachers from different geographical areas throughout the world. Algal biofuels is an emerging area of equal interest to researchers, industries, and policy makers working or focusing on alternative (i.e. renewable) fuels. Algae have been an area of interest due to their wide range of applications. Over the last 5 decades, eukaryotic algae have been used in the aquaculture industry as feed for invertebrates, providing a rich source of antioxidants, dietary fiber, minerals and protein. More recently, there has been a focus on the use of algal biomass in the development of alternative fuels. The extraction of oil from algae has been widely explored as a much more viable feedstock than plant-based oils in large-scale fuel production. using algae as feedstock has the advantages that it doesn't require arable land and that wastewater can be used as a source of nutrients in their culture. The multifunctional approach of algae includes pollution remediation, carbon sequestration, biofuels production, and delivery of value-added products. However, there are still some obstacles that need to be overcome to make their use as potential feedstock for biofuels techno-economically feasible. In order to maintain the sustainability aspect of algal biofuels, various aspects have to be studied and critically analyzed to assess the long-term sustainability of algal derived biofuels. This book discusses the role of algae as a promising future feedstock for biofuels. They are known to sequester carbon in much larger amounts than plants and as such the book also describes their phycoremediation potential for conventional as well as emerging contaminants. It describes the role of anaerobic digestion in algal biorefineries; bioreactions and process parameters; biogas recovery and reuse. The role of algal biofilm based technology in wastewater treatment and transforming waste into bio-products is discussed, and remediation of sewage water through algae is assessed. The book also describes the production of biohydrogen, bio-oil, biodiesel; and the major bottlenecks in their usage. The emerging characterization techniques of these biofuels (bio-oil and biodiesel) are described, as are the decolorizing potential of algae and the genetic engineering techniques that could enhance the production of lipids in algae. Other aspects of the book include the role of remote sensing technology in the monitoring of algae and a life cycle assessment of algal biofuels.

*Hindu Fundamentalism and the Spirit of Capitalism in India* Dec 19 2021 The book makes serious theoretical contribution to the field of political economy in indigenous development, public policy, sociology and development studies. It further establishes the relationship between Hinduisation of indigenous communities and rise of Hindu fundamentalism with a mining led industrial capital while evaluating the impact on the new economic reforms on tribals and their social, cultural, and religious identities in Orissa.

These regional reports contain the latest available minerals data on more than 180 foreign countries and discuss the importance of minerals to the economies of these nations and the United States. Each report begins with an overview of the region's mineral industries during the year. It continues with individual country chapters that examine the mining, refining, processing, and use of minerals in each country of the region and how each country's mineral industry relates to U.S. industry. Most chapters include production tables and industry structure tables, information about Government policies and programs that affect the country's mineral industry, and an outlook section.

Routledge Handbook of Contemporary India Jan 20 2022 India is the second largest country in the world with regard to population, the world's largest democracy and by far the largest country in South Asia, and one of the most diverse and pluralistic nations in the world in terms of official languages, cultures, religions and social identities. Indians have for centuries exchanged ideas with other cultures globally and some traditions have been transformed in those transnational and transcultural encounters and become successful innovations with an extraordinary global popularity. India is an emerging global power in terms of economy, but in spite of India's impressive economic growth over the last decades, some of the most serious problems of Indian society such as poverty, repression of women, inequality both in terms of living conditions and of opportunities such as access to education, employment, and the economic resources of the state persist and do not seem to go away. This Handbook

contains chapters by the field's foremost scholars dealing with fundamental issues in India's current cultural and social transformation and concentrates on India as it emerged after the economic reforms and the new economic policy of the 1980s and 1990s and as it develops in the twenty-first century. Following an introduction by the editor, the book is divided into five parts: Part I: Foundation Part II: India and the world Part III: Society, class, caste and gender Part IV: Religion and diversity Part V: Cultural change and innovations Exploring the cultural changes and innovations relating a number of contexts in contemporary India, this Handbook is essential reading for students and scholars interested in Indian and South Asian culture, politics and society.

**Decentring the Indian Nation Dec 07 2020** The world's largest democracy has experienced strife since its inception in 1947. The contributors to this study examine trends in Indian and Pakistani politics during the late 20th and early 21st centuries whilst focusing on the fragmentation of the body politic.

Phytoremediation Potential of Bioenergy Plants Apr 23 2022 The globally escalating population necessitates production of more goods and services to fulfil the expanding demands of human beings which resulted in urbanization and industrialization. Uncontrolled industrialization caused two major problems – energy crisis and accelerated environmental pollution throughout the world. Presently, there are technologies which have been proposed or shown to tackle both the problems. Researchers continue to seek more cost effective and environmentally beneficial pathways for problem solving. Plant kingdom comprises of species which have the potential to resolve the couple problem of pollution and energy. Plants are considered as a potential feedstock for development of renewable energy through biofuels. Another important aspect of plants is their capacity to sequester carbon dioxide and absorb, degrade, and stabilize environmental pollutants such as heavy metals, poly-aromatic

hydrocarbons, poly-aromatic biphenyls, radioactive materials, and other chemicals. Thus, plants may be used to provide renewable energy generation and pollution mitigation. An approach that could amalgamate the two aspects can be achieved through phytoremediation (using plants to clean up polluted soil and water), and subsequent generation of energy from the phyto-remediator plants. This would be a major advance in achieving sustainability that focuses on optimizing ‘people’ (social issues), ‘planet’ (environmental issues), and ‘profit’ (financial issues). The “Phytoremediation-Cellulosic Biofuels” (PCB) process will be socially beneficial through reducing pollution impacts on people, ecologically beneficial through pollution abatement, and economically viable through providing revenue that supplies an energy source that is renewable and also provides less dependence on importing foreign energy (energy-independence). The utilization of green plants for pollution remediation and energy production will also tackle some other important global concerns like global climate change, ocean acidification, and land degradation through carbon sequestration, reduced emissions of other greenhouse gases, restoration of degraded lands and waters, and more. This book addresses the overall potential of major plants that have the potential to fulfil the dual purposes of phytoremediation and energy generation. The non-edible bioenergy plants that are explored for this dual objective include *Jatropha curcas*, *Ricinus communis*, *Leucaena leucocephala*, *Milletia pinnata*, *Canabis sativa*, *Azadirachta indica*, and *Acacia nilotica*. The book addresses all possible aspects of phyto-remediation and energy generation in a holistic way. The contributors are one of most authoritative experts in the field and have covered and compiled the best content most comprehensively. The book is going to be extremely useful for researchers in the area, research students, academicians and also for policy makers for an inclusive understanding and assessment of potential in plant kingdom to solve the dual problem of energy and pollution.

**The Modern Anthropology of India** Jul 26 2022 The Modern Anthropology of India is an accessible textbook providing a critical overview of the ethnographic work done in India since 1947. It assesses the history of research in each region and serves as a practical and comprehensive guide to the main themes dealt with by ethnographers. It highlights key analytical concepts and paradigms that came to be of relevance in particular regions in the recent history of research in India, and which possibly gained a pan-Indian or even trans-Indian significance. Structured according to the states of the Indian union, contributors raise several key questions, including: What themes were ethnographers interested in? What are the significant ethnographic contributions? How are peoples, communities and cultural areas represented? How has the ethnographic research in the area developed? Filling a significant gap in the literature, the book is an invaluable resource to students and researchers in the field of Indian anthropology/ethnography, regional anthropology and postcolonial studies. It is also of interest to students of South Asian studies in general as it provides an extensive and critical overview of regionally based ethnographic activity undertaken in India.

## Indian States At A Glance 2008-09: Performance, Facts And Figures - Jharkhand Oct 29 2022

*The Jharkhand Movement* Mar 10 2021 Jharkhand, the land of forest, named by the people of the neighboring plains, had been a safe haven of the indigenous peoples until the sixteenth century when the process of central state formation began to grow out of the nontribal matrix in the region. The states that emerged then fell under the direct influence and control of the great empires of successive periods that encroached upon the resources and lives of the indigenous peoples. They disrupted their egalitarian social system and their culture based upon a symbiotic relationship with their environment, forcing the indigenous people to retreat to even more inhospitable regions to rebuild their social structure. However, they were never able to fully escape the ever-increasing boundaries of the state, which eventually stripped the Jharkhand of its resources and left its people peasants. The modern Jharkhand movement, a continuation of the peoples' resistance to the encroaching state, has been widely covered in the media and academic circles. Various analytical reports, academic interpretations and political explanations, often holding contradictory views, have been published over a period exceeding the last five decades. The production of such a huge corpus of literature shows the strength of the movement, and the immense significance of the issues. Containing contributions by leading social scientists and activists, this volume furthers the discourse on the relationship between mainstream nationalism and the indigenous identity often termed ethnicity, as it relates to the nation state. In doing so, it helps civil society understand the relevance of autonomy and identity of the indigenous peoples of the country as a whole. The basic line of inquiry concerns the issues (dispossession from life supporting resources of land, forest, water and identity), the main cause (internal colonialism) and the remedy (provision of autonomy).

**India's National Security** Sep 04 2020 The global security environment in the last five years has been characterised by a state of 'no war, no peace' among major powers, resulting in a state of uncertainty about their national security objectives. For instance, the US has been concerned about the attitudes of Iran, Russia, North Korea, China, and others, and yet did not expect a direct military conflict with them. On the other hand, China has expanded its naval strategy from a mere 'off-shore defence' to 'open seas protection' and has called for both 'defence and offence' instead of merely 'territorial air defence', thereby indicating preparedness for the possibility of a military confrontation. The major powers have been thus groping for suitable responses to their threat perceptions. It is in this kind of a complex and confusing international environment that India, as a rising power, has been called upon to wade through its strategic partnerships with major powers and nurture friendships with various Asian and African countries. This sixteenth volume of India's National Security Annual Review offers indispensable information and evaluation on matters pertaining to national security. It undertakes a thorough analysis of the trends to provide a backdrop to India's engagement with various countries. The volume also discusses persisting threats from China and Pakistan. With

contributions from experts from the fields of diplomacy, academia, and civil and military services, the book will be one of the most dependable sources of analyses for scholars of international relations, foreign policy, defence and strategic studies, and political science, and practitioners alike.

*India's Tribes* Oct 05 2020 India's Tribes: Unfolding Realities brings together critical essays on tribal communities, some of the most marginalized people in India. The chapters, authored by eminent scholars who made significant contributions to the field of Tribal Studies, present important research on resource appropriation, poverty, education, health, economy and the tribal situation. They discuss issues such as problems of development-induced displacement, labour exploitation, sustainable livelihoods, politics of religious conversion, tribal women's issues, resistance movements and policy responses. The editor's introductions reflect on predicaments of tribal people in contemporary times, besides presenting a comprehensive perspective on the contribution of the selected essays to an understanding of tribal life. The series 'Social Change in Contemporary India' brings together key texts published in the prestigious journal Social Change, from 1971 till present times. These writings, most of which are considered canonical, address important issues in health, education, poverty and agriculture, with special focus on the disadvantaged groups. The essays will help readers identify key points in the history of policymaking in India and major discourses and debates and their impact.

**Transforming Food Systems for a Rising India** Apr 11 2021 This open access book examines the interactions between India's economic development, agricultural production, and nutrition through the lens of a "Food Systems Approach (FSA)." The Indian growth story is a paradoxical one. Despite economic progress over the past two decades, regional inequality, food insecurity and malnutrition problems persist. Simultaneously, recent trends in obesity along with micro-nutrient deficiency portend to a future public health crisis. This book explores various challenges and opportunities to achieve a nutrition-secure future through diversified production systems, improved health and hygiene environment and greater individual capability to access a balanced diet contributing to an increase in overall productivity. The authors bring together the latest data and scientific evidence from the country to map out the current state of food systems and nutrition outcomes. They place India within the context of other developing country experiences and highlight India's status as an outlier in terms of the persistence of high

levels of stunting while following global trends in obesity. This book discusses the policy and institutional interventions needed for promoting a nutrition-sensitive food system and the multi-sectoral strategies needed for simultaneously addressing the triple burden of malnutrition in India.

**Errorless BPS 15 Year-wise General Studies Prelim Solved Paper 1 (1994-2019)** Feb 09 2021

*Indigenous Question, Land Appropriation, and Development* Aug 27 2022 This book provides a first-hand account of land conflict and power relations in one of the most resource-rich states in India — Jharkhand. Through the eyes of the state, corporate, and indigenous actors, it reveals how conflict over land in Jharkhand is firmly embedded in the ideological foundations of the key actors in the region. Based on thorough research on the ground and interviews with state, corporate, and indigenous actors, the book explores a host of themes such as: the need and efficacy of state-led modernisation programmes, the market as the best regulator, and ‘ideas’ of development. The volume highlights how land conflicts in Jharkhand will persist until the ideological differences are recognised and welcomed in hopes of making way for collaborative governance. **Re-Interrogating Civil Society in South Asia** Jan 08 2021 This book offers an overview of the history and development of civil society in three major nations of South Asia – Pakistan, India and Bangladesh – from colonial times to the present. It examines the liberalization of civil society since the 1980s, the needs it created for civil action, the professionalization of civil society organizations, and the extent to which civil society may benefit society at large in the context of local, national and global transformations in the economy, political regime and ideology. The reader will find new insights on the interaction between the liberalization of multifaceted civil societies in the three countries, presenting contrasts such as restrictions put on women's organizations or labour unions and acceptance of religious organizations' activities. The volume looks at forms of transfer of civil society models, representation and democratic legitimacy of civil society organizations such as nongovernmental organizations, government organized NGOs and faith-based organizations, along with the structuring of civil society through legal frames as well as female, religious, and ethnic mobilizations around language and literature. Using wide-ranging empirical data and theoretical analyses, it deals with civil society issues relating to human rights and political challenges, justice, inequality, empowerment, and the role of bureaucracy, women's movements, and ethnic and linguistic minorities. It also presents early responses to the Covid-19 crisis in 2020 which created significant pressure on the states and on civil society. This book will be useful to scholars and researchers of political studies, development studies, sociology, public policy and governance, law and human rights, as also to professionals in think tanks, civil society activists and NGOs.
