Futures Aug 02 2022 A hundred years in the future, humans have finally cracked the secrets of time travel. By manipulating the energy in the Higgs Quantum Electromagnetic Field with their minds, individuals can travel freely throughout both space and time—but not without a price. Time travelers are disappearing in the past, never to be heard from again—and no one knows why. Others are returning from the past and claiming to be from another future, another universe. They are declared insane and locked away in mental asylums. Determined to uncover the truth, two officers from the time travel police force risk everything to get the answers they need. They break all the rules and find

themselves in a different future. There, they discover a horrible truth. To make matters worse, three super villains from a distant future have fled to our time in a desperate bid to hide from their own government. A history professor has dabbled with the Higgs Field to help an ancestor in the past, and his efforts have gone horribly wrong. The two time officers must now set things right before it is too late, but they face impossible odds as each action complicates the next, and the past may not be what it once was. With so many agendas and so many histories at stake, can the officers unravel the mysteries and stop the criminals before time itself is compromised?

**An Invitation to Quantum Field Theory** Nov 24 2021 This book provides an introduction to Quantum Field Theory (QFT) at an elementary level—with only special relativity, electromagnetism and quantum mechanics as prerequisites. For this fresh approach to teaching QFT, based on numerous lectures and courses given by the authors, a representative sample of topics has been selected containing some of the more innovative, challenging or subtle concepts. They are presented with a minimum of technical details, the discussion of the main ideas being more important than the presentation of the typically very technical mathematical details necessary to obtain the final results. Special attention is given to the realization of symmetries in particle physics: global and local symmetries, explicit, spontaneously broken, and anomalous continuous symmetries, as well as discrete symmetries. Beyond providing an overview of the standard model of the strong, weak and electromagnetic

interactions and the current understanding of the origin of mass, the text enumerates the general features of renormalization theory as well as providing a cursory description of effective field theories and the problem of naturalness in physics. Among the more advanced topics the reader will find are an outline of the first principles derivation of the CPT theorem and the spin-statistics connection. As indicated by the title, the main aim of this text is to motivate the reader to study QFT by providing a self-contained and approachable introduction to the most exciting and challenging aspects of this successful theoretical framework.

Shield Down Apr 05 2020 SGR 0245+05, a dangerous magnetar within close galactic proximity, shows signs of erupting just as the Earth is in a magnetic reversal and losing its magnetic shield. Professor James Templeton, a brilliant but maligned astrophysicist who alone predicted the eruption of "+05", is summoned to Washington, DC, by Dr. Jacqueline DeFazio, his former lover and head of NASA's Space Life Sciences Division, to consult with high-ranking governmental officials about the prospects for a major starquake in "+05". He tours one of over one hundred American underground mini-cities that were built in the preceding decade based on his scientific predictions and is astounded by the realization that NASA and Dr. DeFazio were following up massively on his predictions of doom, even as they were attacking him in public. The magnetar strikes almost immediately after the high-level briefing and before he and DeFazio can reignite their relationship. Templeton is trapped in DC but manages to return home after a harrowing cross-country trip across a dystopian America in the initial stages of societal collapse. After two hundred years, the restoration of the magnetic

"Angel particle" bearing properties of both particles and anti-particles, which was recently discovered by the Stanford team of experimental physicists, is usually associated with Majorana fermions (predicted in 1937 by Ettore Majorana). In this message we point out that particles bearing properties of both matter and anti-matter were as well predicted without any connexion with particle physics, but on the basis of pure mathematics, namely — neutrosophic logic which is a generalization of fuzzy and intuitionistic fuzzy logics in mathematics.
